

# Usability Testing

As we had lots of potential users that were available, we conducted usability testing. Users were able to navigate through the app without prompting, showing us that our app was user friendly. One person described the app as very pleasant to use, saying the graphics and colour scheme were very pleasing and the information was clear. They said that the checkmark button seemed like a button, so we added a feature described in the paragraph below.

They liked how the weather icons and graphs were displayed, and the toggle at the bottom made it clear that you could switch over to the map page because of the icons which are universally understandable.

We noticed that the users tried to swipe on the cities to change them, so we implemented this feature as described in the changes. We also added a short piece of text saying 'the weather is good' and an animation which highlighted this when the check mark was clicked,
